

NIHAR SHAH

Computer Science Undergraduate | Applied AI Systems Builder

Ahmedabad, India 380007

+919925016026 niharshah0405@gmail.com

PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in applied AI systems, conversational AI, and autonomous agent orchestration. Experienced in building production-oriented AI voice assistants, multi-agent automation systems, and AI-driven evaluation platforms. Focused on real-world deployment, workflow optimization, and scalable AI system design.

WEBSITES, PORTFOLIOS, PROFILES

- Portfolio: niharshah.in
- GitHub: github.com/nihar5hah
- LinkedIn: linkedin.com/in/niharshah0405/

SKILLS

CORE EXPERTISE

- Multi-Agent AI Orchestration (OpenClaw)
- Conversational AI System Design
- AI Voice Assistants (Healthcare Automation)
- Prompt Engineering & Structured Prompt Systems
- AI Evaluation & Assessment Workflows
- Workflow Automation & Scenario Optimization

PROGRAMMING

- Python
- C / C++
- JavaScript (Node.js basics)
- Bash / Shell scripting

AI & COMPUTER VISION

- OpenCV
- Face Recognition Systems
- NLP Fundamentals (intent classification, entity handling)

PLATFORMS & TOOLS

- Supabase (PostgreSQL, Auth, Realtime)
- Git & GitHub
- Retell, Vocera
- Next.js (Dashboard development)

INTERNSHIP EXPERIENCE

Product Intern | Confido Health

Remote | May 2025 – Present

- Contributed to development and optimization of AI voice assistants for healthcare clinics
- Designed structured prompt systems for automated call handling
- Improved conversational flows to enhance task completion and reliability
- Evaluated real-world call scenarios and pruned non-critical metrics

- Collaborated with product and engineering teams to deploy and iterate AI workflows

Intern | [Crest Data Systems](#)

Ahmedabad, India | Jun 2023 – Jul 2023

- Assisted in software development and data related tasks under senior engineers
- Gained exposure to real world development workflows and corporate engineering practices

PROJECTS

KalExam – AI-Powered Examination & Evaluation Platform (Ongoing)

- Built an AI-based platform that generates personalized study strategies from syllabus, study material, and past papers.
- Developed a RAG-powered learning system with contextual chat and source-grounded explanations.
- Implemented multi-model AI routing to optimize speed and response quality.
- Added source ingestion for PDFs, websites, and YouTube videos with transcript extraction and AI fallback.
- Designed scalable architecture with caching, async pipelines, progress tracking, and mobile-optimized UI.

OpenClaw Multi-Agent Orchestration System

- Built a multi-agent AI orchestration system using OpenClaw with a Boss–Worker architecture
- Designed delegation patterns coordinating 4 specialized AI agents (Main, Coder, Researcher, Extractor)
- Implemented 24/7 autonomous workflows with scheduled cron-based automation
- Designed self-healing gateway watchdog and automated cron repair mechanisms
- Implemented prompt-injection safeguards and structured role-locking security architecture

Mission Control – AI Agent Monitoring Dashboard

- Designed and built a real-time monitoring dashboard for my OpenClaw AI agents using Next.js and Supabase
- Implemented live activity feed with filtering and event-based updates
- Built agent health monitoring with uptime tracking and system status visibility
- Integrated WebSocket gateway and Supabase Realtime for event-driven architecture

HireAI – AI-Powered Job Assessment Platform

- Built an AI-driven platform to evaluate candidates strictly based on job requirements
- Developed during a 24-hour hackathon with full end-to-end system execution
- Implemented job description analysis to generate structured assessments (objective, subjective, coding)
- Designed skill-based evaluation workflows to reduce unqualified applications
- Focused on transparent and automated candidate scoring logic

Healthcare AI Voice Assistant & Prompt Generator (Confido Health)

- Designed and optimized conversational AI systems for automated clinic call handling across multiple healthcare locations
- Built a dynamic prompt generation system to create location-specific AI voice agent configurations at scale
- Developed structured JSON-based prompt templates with configurable blocks and metadata
- Implemented automated injection of clinic parameters including operating hours, procedures, call routing, and integrations
- Evaluated real-world call scenarios and refined conversational flows to improve accuracy and task completion

FaceAttend – AI Facial Recognition Attendance System

- Developed automated attendance system using computer vision and facial recognition techniques
- Implemented real-time multi-face detection and recognition for classroom-scale environments
- Integrated Supabase (PostgreSQL, authentication, storage) for secure and scalable data handling
- Optimized recognition workflows for reliable attendance automation

EDUCATION

Udgam School For Children

Bachelor of Technology: Computer Science

Charotar University of Science And Technology (Expected 05/2027)
